

Below is a **full-scale, advanced-level project brief** designed for a *real-world*, production-quality Webflow build.

This requirement set simulates what a professional agency would receive from a client for a **large Webflow-based digital product**.

It includes **functional requirements, CMS architecture, interactions, integrations, workflows, access levels, and performance expectations**—all tailored for what can realistically be built inside **Webflow** (plus light custom code where Webflow allows).

ADVANCED FULL-SCALE WEBFLOW PROJECT REQUIREMENTS

Project Title: *EduMaster – Online Course & Membership Platform*

Goal:

Build a fully dynamic, multi-role, multi-page, CMS-powered learning platform with memberships, course libraries, dashboards, forms, integrations, automation workflows, and advanced UI interactions—all using **Webflow**.

1. User Roles & Access Levels

1.1 Public Users (Non-Logged In)

- Can view: Home, About, Courses Overview (limited preview), Blog, Pricing.
- Can register for:
 - Free account
 - Paid membership plan
- Limited access to course content (only free lessons).

1.2 Registered Free Members

- Can log in to their dashboard.
- Can access:
 - Free courses
 - Free resources library
- Can update their profile.
- Can bookmark resources/courses (saved via CMS).

1.3 Paid Members / Premium Users

- Access all paid courses.
- Access downloadable lesson materials (PDF, ZIP, video).
- Access exclusive "Members-Only Blog".
- Access live webinar registration pages.

1.4 Admin (Webflow Editor Role)

- Manages all CMS collections.
- Adds new courses, lessons, authors, categories.
- Can publish/unpublish items.
- Can view student form submissions.

2. Website Structure (Pages & Templates)

2.1 Static Pages

- Home
- About
- Pricing
- FAQ
- Contact
- Login / Sign Up
- Dashboard (Premium gated page)
- Terms & Conditions
- Privacy Policy

2.2 CMS-Driven Template Pages

- Course Template
- Lesson Template
- Blog Template
- Category Template
- Instructor Template
- Resource Template
- Webinars Template

3. CMS Architecture Requirements

3.1 Collections to Create

1. **Courses**

- Title
- Slug
- Category (Reference)
- Instructor (Reference)
- Cover image
- Description
- Level (Beginner/Intermediate/Advanced)
- Duration
- Price (Free/Paid)
- Hero video / trailer embed URL
- List of included materials

2. **Lessons**

- Lesson Title
- Video Embed
- Resources/Downloads (File field)
- Lesson Number
- Belongs to Course (Reference)
- Premium or Free (Boolean)

3. **Instructors**

- Name
- Bio (Rich Text)
- Image
- Social links

4. **Blog Posts**

- Title
- Thumbnail
- Category
- Author
- Content
- Premium/Free (Boolean)

5. **Categories**

6. **Tags**

7. **Resources Library**

- Documents, PDFs, Templates, ZIP files
- Resource Type
- Free / Premium

8. **Webinars**

- Event title
- Date
- Time

- Registration Link (Form or external link)

4. Key Advanced Features to Implement

4.1 Membership System

- Use Webflow Memberships.
- Set up:
 - Free tier
 - Premium tier
- Restrict content based on membership status.
- Automatic redirect to login page for restricted content.

4.2 Dynamic Learning Dashboard

For logged-in users only:

- Show:
 - Greeting with username
 - List of "Courses You Are Enrolled In"
 - "Continue Watching" section (save last lesson via user fields)
 - Bookmarked lessons/resources
 - Upcoming webinars

4.3 Course Player Experience

Requirements:

- Sticky sidebar showing lesson list (CMS-driven).
- Play video in main area (via Vimeo/YouTube embed).
- Auto-highlight "current lesson."
- Next/Previous lesson navigation.
- Progress bar (custom code using localStorage).

4.4 Advanced Search & Filtering System

Create **three search systems**:

1. Course search
2. Blog search

3. Resource library search

Include dynamic filters:

- Categories
- Levels
- Tags
- Paid/Free

Use:

- Webflow Search
- OR custom filter solution (Finsweet Attributes recommended)

4.5 Multi-Step Form Automations

Forms required:

- Contact form
- Webinar registration form
- Course enrollment form

Integrate each form with:

- **Zapier or Make.com** workflows
- Google Sheets or Airtable
- Automatic email updates

4.6 Custom Interactions & Animations

- Hero section 3D Lottie animation
- Scroll-triggered animations on Home
- Smooth page transitions (fade in/out)
- Lesson list slide-out animation
- Micro-interactions on buttons, cards, menus

4.7 Personalized Content

- Create "**Recommended Courses**" section using:
 - Conditional visibility
 - Category match logic

4.8 Performance & SEO Requirements

- Optimize all images via Webflow's built-in responsive images.
- Implement:
 - Minified JS/CSS
 - Lazy loading
 - Alt text
 - Semantic headings
- Add dynamic OG tags for course & blog CMS pages.

4.9 Custom Domain, Hosting & Backups

- Connect domain (e.g., edumaster.com).
- Enable SSL.
- Set up 301 redirects.
- Maintain manual backups ("Milestone Versions").

4.10 Optional: API Integration

(Allowed through Webflow Embed + Custom Code)

Example:

- Dashboard showing real-time analytics:
 - Fetch data from external API (e.g., Google Sheets API).
- Display live weather/time/date for personalized dashboard header.

5. Deliverables

As a Webflow Designer/Developer, you must produce:

- Fully functional Webflow site
- Properly structured CMS collections
- Responsive layout for all devices
- Membership-restricted content workflow
- Automated integrations (Zapier/Make.com)
- Documentation:
 - CMS schema
 - Editor instructions
 - Backup + version strategy

- Custom code snippets
- Publishing instructions

6. Success Criteria (Evaluation/Grading)

The project is considered complete if:

- All pages are responsive across devices.
- Membership gating works successfully.
- Dashboard loads personalized content.
- Course player works with no broken CMS links.
- Blog & Course pages generate dynamically.
- Integrations correctly log submissions externally.
- Animations feel smooth and perform well.
- All SEO fields are filled correctly.
- High Lighthouse performance score (80+).
