

10 intermediate-level Webflow assignments, each designed to help learners strengthen their skills in layout, CMS, interactions, forms, SEO, integrations, and overall Webflow project structure.

These tasks build upon basic foundational skills and introduce more complex features—*while still being accessible to intermediate learners*.

10 Intermediate-Level Webflow Assignments

1. Design a Multi-Section Homepage With Custom Interactions

Requirements:

- Create a homepage with the following sections: Hero, Services, About, Testimonials, CTA.
 - Add at least **three interactions**, such as:
 - Fade-in on scroll
 - Slide-up animation
 - Hover scaling for images or cards
 - Use **Combo Classes** to vary styles across similar elements.
 - Ensure layout uses **Flexbox or Grid** consistently across sections.
-

2. Create a CMS-Driven Team Members Page

Requirements:

- Create a CMS Collection: **Team Members**
 - Fields: Name, Role, Bio (Rich Text), Profile Image, Social Links.
- Design a **Team Listing Page** using a **Collection List**.
- Add filters (e.g., show only active members).
- Create a **CMS Template Page** with:
 - Hero section showing name + role
 - Bio section with formatted Rich Text

- Link to social media
-

3. Build a Multi-Step Form Modal

Requirements:

- Create a button that **opens a modal popup** using interactions.
 - Inside the modal, create a two-step form:
 - Step 1: Name, Email
 - Step 2: Dropdown, Message
 - Animate step transitions (slide or fade).
 - Add custom designed **Success** and **Error** states.
-

4. Create a Blog Category Filtering System

Requirements:

- Add CMS Collection: **Blog Categories**
 - Connect this to Blog Posts via a **Reference Field**.
 - Create a blog listing page with:
 - Category buttons
 - A Collection List that filters dynamically when category buttons are clicked (use Webflow's built-in filter or conditional visibility).
 - Add pagination for long lists.
-

5. Develop a Responsive Pricing Table

Requirements:

- Create a 3- or 4-column pricing grid using **CSS Grid**.
- Each pricing card must include:
 - Plan name
 - Price
 - Feature list
 - CTA button

- Add hover interactions (e.g., elevate card on hover).
 - Optimize layout for tablet and mobile (stack vertically).
-

6. Build a CMS-Driven Portfolio With Lightbox Gallery

Requirements:

- Create CMS Collection: **Portfolio Projects**
 - Title, Description, Main Image, Multiple Gallery Images, Category
 - Create a portfolio grid with filtering:
 - Use category filters or conditional visibility
 - Add a Lightbox for gallery images inside the template page.
 - Style template page with a strong visual hierarchy.
-

7. Add Lottie Animations to a Page

Requirements:

- Insert at least **one Lottie animation** (scroll-based or interaction-based).
 - Connect the Lottie animation to:
 - Scroll animation OR
 - Mouse hover interaction
 - Ensure animation is responsive and does not block page content.
 - Use Webflow interactions to control animation playback.
-

8. Build a Mega Menu Navigation System

Requirements:

- Use Navbar component as base.
- Add dropdowns that expand to form a **mega menu**:
 - Include multiple columns using Grid
 - Add icons and descriptions under each link
- Animate the dropdown with a fade/slide interaction.
- Test for responsiveness and mobile adaptation.

9. Build a Multi-Page Website With Template Reuse (Symbols/Components)

Requirements:

- Create at least **5 pages**: Home, About, Services, Blog, Contact.
- Use **Symbols (Components)** for:
 - Navbar
 - Footer
 - Contact CTA Blocks
- Update the component once and ensure it reflects across all pages.
- Add structured page settings: titles, descriptions, OG images.

10. Integrate Webflow With Zapier for Automatic CMS Item Creation

Requirements:

- Create a CMS Collection: **User Submissions**
- Create a form with fields:
 - Name
 - Email
 - Submission Content (Rich Text)
- Create a **Zap**:
 - Trigger: Webflow form submission
 - Action: Create CMS Item in **User Submissions**
- Set CMS Items to "Draft" or "Staged for Publish."
- Test the workflow and verify entries appear in the CMS dashboard.
